

# Enterprise Library 5.0: The New Stuff

Ade Miller

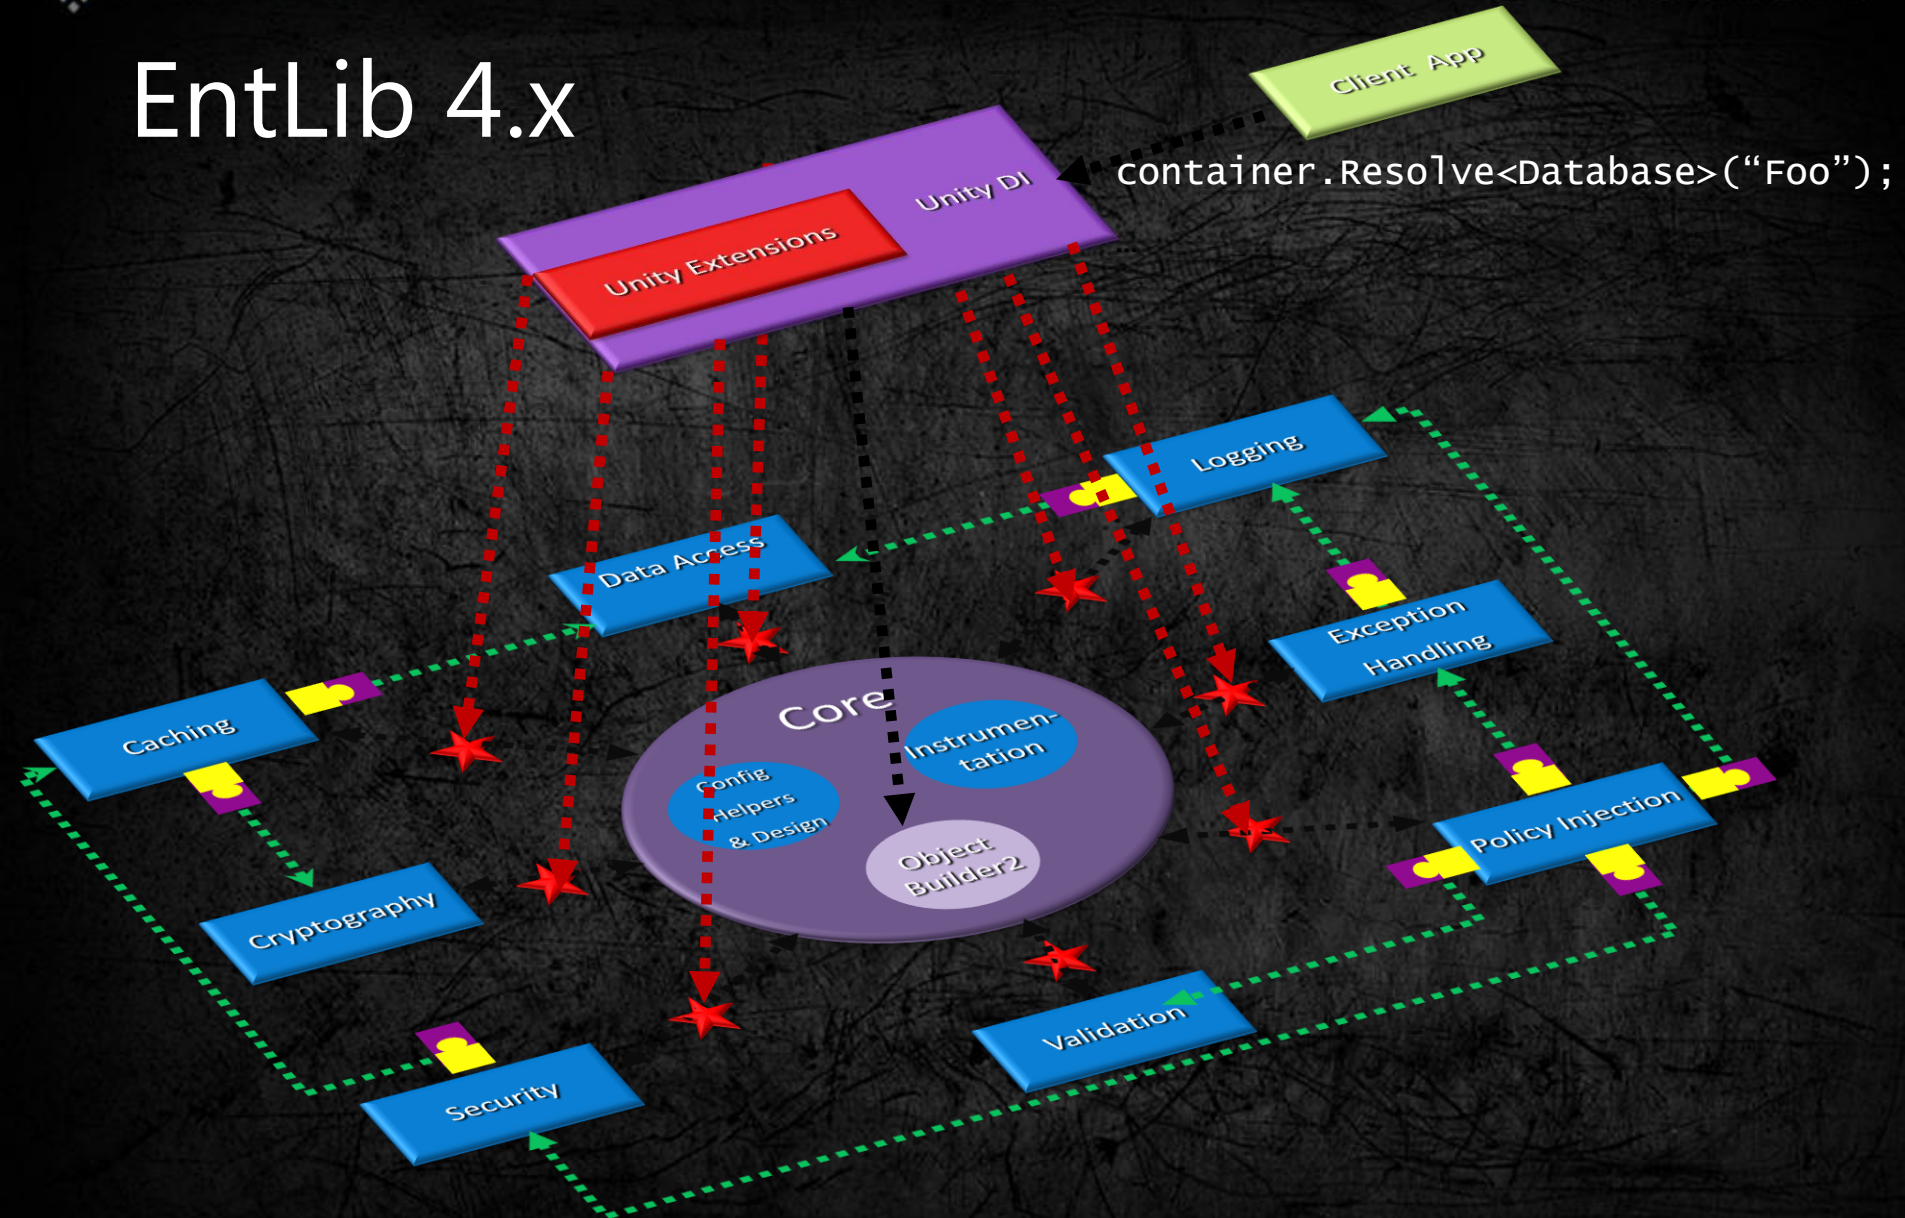

Microsoft patterns & practices

# Session Objectives & Takeaways

- Session Objective(s):
  - Show what's new in Enterprise Library 5
- Enhanced User Experience
- Simplicity for the Win!
- Learnability & Discoverability
- EntLib 5.0 now available!

# EntLib 4.x

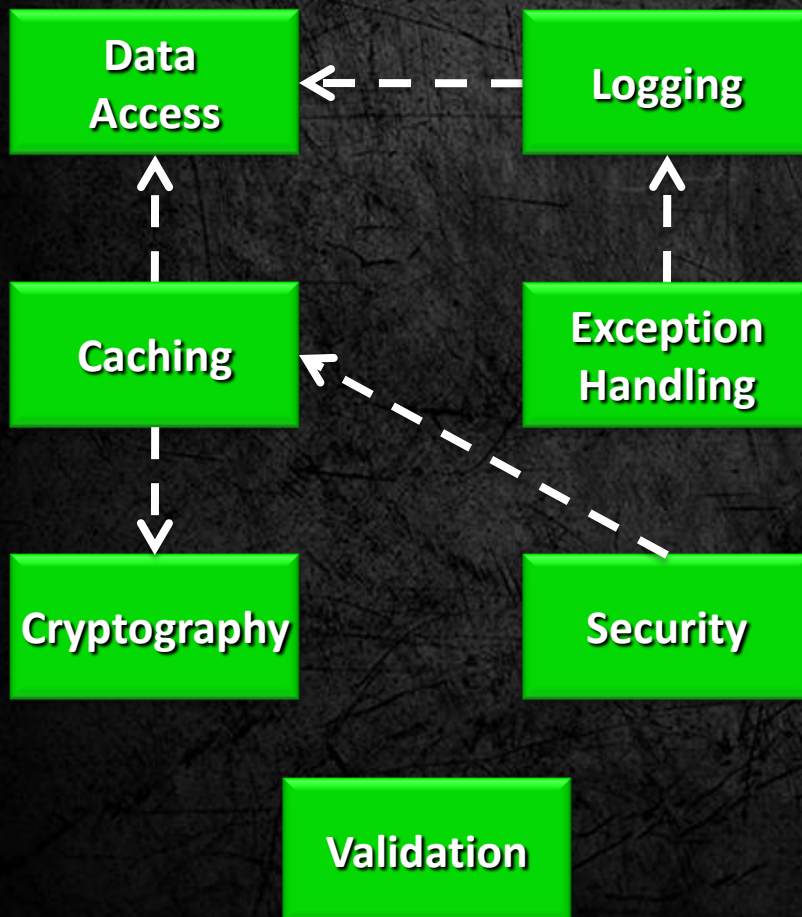

# Conceptual Architecture

Functional blocks → Common Infrastructure

# What's New?

# .NET 4.0 / VS 2010

- Binaries
  - Target .NET 3.5 SP1
  - Work unchanged in .NET 4.0 projects
- Source
  - VS 2008 sln/proj targeting 3.5 SP1
  - VS 2010 sln/proj targeting 4.0
- Config tool
  - Fully integrated editor in VS 2008
  - Launcher from VS 2010 (like WCF config tool)

# Processing Results from Sprocs

- Data Access block traditionally made it easier to call stored procedures (sproc)
- Processing the results still means dropping back into classic ADO.NET code
- Issue: how could we make it easier to consume the results of a sproc?

# LINQ Style Result Processing

- Basic idea:
  - Instead of a datareader from a query, get back an `IEnumerable<T>`
  - Now we can do LINQ to Objects
- Introduced Accessors
  - provide a higher level abstraction that combines input mapping, output mapping, and result set management into a single object.
- Note: Accessors are easily injectable

# DEMO

DAAB Accessors

# Async DAAB

- Database API addition
- Follows classic Begin/End async pattern
  - NonQuery
  - Scalar
  - Reader
  - XmlReader (SQL Server only)
- Not supported on all databases

# Async Data Access

```
var db = EnterpriseLibraryContainer
        .Current.GetInstance<Database>();
if(db.SupportsAsync) {
    db.BeginExecuteScalar("Get Top Ten Products",
        CompletionMethod);
}

public void CompletionMethod(IAsyncResult async)
{
    int count = (int)db.EndExecuteScalar(async);
    ...
}
```

# Logging Performance

- Originally, planned to implement async logging
- Perf analysis of the lower level operations of the logging block (v4.1) showed:
  - The formatter took 54% of the total time
  - Of this, the most expensive operations are:
    - 11.76      Getting the machine name
    - 9.63      Computing Severity textual representation
    - 5.70      Undetermined mscorwks.dll work
    - 5.17      Computing DateTime textual representation
    - 4.46      StringBuilder.Append
    - 4.10      Getting the process name

# Higher Performing Logging

- Formatter responsible for ~50% of the execution time
- Improvements

Function Name	Inclusive Samples	Exclusive Samples	Inclusive Samples %	Exclusive Samples %
FormatWithOriginalTemplate	6,686	14	48.18	0.10
FormatWithNewTemplate	3,680	9	26.52	0.06
FormatWithNewTemplateWithFixedDate	3,132	11	22.57	0.08

N=1M

**45%** local  
improvement

**53%** local  
improvement

# Config Experience

- Programmatic config support
- IntelliSense in XML editor
- New configuration tool

# Fluent Configuration Interface

- Motivation:
  - Customer requested a better way to configure EntLib programmatically
  - Make *our own* test cases more readable

Ref: Martin Fowler, Eric Evans. <http://martinfowler.com/bliki/FluentInterface.html>

# DEMO

## Configuration With Fluent Interfaces

# Configuration Tool Stories

- **Usability:** Improve intuitiveness & learnability
- **Simplicity:** Reduce the number of design time assemblies
- **Extensibility:** Simplify the way config for custom handlers/providers/blocks can be plugged into the config tool

# DEMO

New Configuration Tool

# Hierarchical config

- Split config into multiple physical files
- Combine them at runtime
- Allows master + override style of config
  - Runtime version of environmental overrides

# Validation Application Block

- ASP.NET DataAnnotations support
- WPF Validation
- MetadataType
- Polymorphic validation
- Recursive Validation

# DataAnnotations Interop

- VAB API applies DataAnnotation validations
- DataAnnotation API applies VAB
- Note: server-side only (for now)
  - Use mixed model

# WPF Validation

- VAB validators hooked up to WPF validation system
- WPF only, not Silverlight

# MetadataType

- Problem: Add Validation attributes to generated code
  - Linq to SQL
  - EF
- Honor MetadataType attribute
  - Adds "buddy class" with validation attributes on it

# DEMO

## Validation Block Improvements

# EntLib Internals

# Tackling External Complexity

- Single entry point
  - `EnterpriseLibraryContainer.Current`
- Supporting testability in your code that uses EntLib
  - Using DI style with instances
- Container independence
  - Not tied to Unity
  - Can build your own adapters
- Preliminary performance is same as 4.1 or better
- Importantly: Existing user code still works

# Tackling Internal Complexity – Architectural Refactoring

- Cleanup
  - removed WMI
  - reduced # assemblies
    - EL 4.1 – 89
    - **EL 5.0 – 33**
- Changed internals significantly
  - got rid of ~200 classes!
    - added ~120, but less complicated
  - removed design time assemblies
  - removed layers of indirection

# Custom Blocks & Providers

- We broke you, sorry!
  - There are not that many of you (<2%)
- Much easier to write
- Pay attention to:
  - Type registrations
  - Object lifetime
  - Config change support
  - Config tool

# DEMO

Getting EntLib objects

# Learnability

- New Guides
  - Your feedback is invited

proven practices for predictable results

## Zen and the Art of Managing Crosscutting Concerns in Enterprise Software Development

Enterprise Library 5.0 Developer Notes

# PREVIEW

July 22, 2009

# Key Takeaways

- EL 5.0 has released!
- Improved user experience
- Simpler, more consistent code base
- Simpler to use
- Better support for DI-style of development
- Focus on testability and maintainability

**Engage with us!**

# Call for Action

1. Download it
2. Provide feedback
3. Fill out a survey
  - [tinyurl.com/entlib](http://tinyurl.com/entlib)

# Resources

- All EntLib5 current bits:
  - [entlib.codeplex.com](http://entlib.codeplex.com)
  - [unity.codeplex.com](http://unity.codeplex.com)
- Released Enterprise Library and related resources:
  - [msdn.microsoft.com/practices](http://msdn.microsoft.com/practices)
  - [msdn.microsoft.com/entlib](http://msdn.microsoft.com/entlib)
- Enterprise Library Community Contributions:
  - [codeplex.com/entlibcontrib](http://codeplex.com/entlibcontrib)
- Enterprise Library team blogs:
  - Chris: [www.tavaresstudios.com](http://www.tavaresstudios.com)
  - Grigori: [blogs.msdn.com/agile/](http://blogs.msdn.com/agile/)
  - Bob: [blogs.msdn.com/bobbrum/](http://blogs.msdn.com/bobbrum/)

# Thank you!

# Questions?

- After this session you will receive a questionnaire about it on your email.
- Questionnaires will also be available in the profile section of the NT Conference website.
- By filling out this questionnaire you help us make this conference even better. Thank you!
